Nate Arnold

Senior Full Stack and AI Engineer

hello@natearnold.me linkedin.com/in/arnonate natearnold.me Kansas City, MO

SUMMARY

Full-stack software engineer with 15+ years shipping production software in healthcare, education, construction tech, fitness and wellness, pharma, ecommerce, and SaaS. Strongest in React, TypeScript, Next.js, Node.js, Laravel, and GraphQL on PostgreSQL and AWS. Current focus is LLM integration, agentic AI systems, RAG, and AI automation that holds up in production. Comfortable owning a feature end to end, from data model and API to UI, mobile, and deploy. Former high school science teacher on a constant quest to learn and level up. I see code as a way to solve real problems and find joy in being part of that process.

EXPERIENCE

Senior Software Engineer · OpenSpace

11/2025 – Present · San Francisco, CA

- Build full-stack features for an AI-powered construction site documentation platform used by thousands of construction sites
- Work in a TypeScript stack: React and Next.js on the front end, Node.js services on the back, PostgreSQL and AWS underneath
- Build pipeline features that turn 360-degree site captures into structured progress, schedule, and QA data, processing hundreds of thousands of images a month with computer vision and LLM steps in place of manual tracking
- Partner with ML, product, and design to ship AI features with human review and evaluation built in

Independent Consultant

2024 – Present

- Build full-stack apps, LLM features, and agentic workflows for clients, owning each project from scoping through launch and support
- Build RAG assistants and document pipelines with LangChain, LangGraph, pgvector, and MCP tools that connect models to client data

Senior Full Stack Software Engineer · EXOS

02/2022 – 11/2025 · Phoenix, AZ

- Owned features end to end on the EXOS member app and coaching platform, used by tens of thousands of members across Fortune 500 wellness programs, pro athletes, and military clients
- Built React Native and React/TypeScript front ends on a GraphQL microservice backend running on AWS Lambda, with PostgreSQL, DynamoDB, and Redis
- Led LLM coaching features that cut coach prep time by around 27%. Built on Claude and OpenAI APIs with structured outputs and function calling, they generate personalized workout, nutrition, and recovery suggestions
- Shipped paid features and A/B tests with product and design in two-week sprints, and improved CI/CD on GitHub Actions

Partner and Full Stack Engineer · Midcoast Collective

2020 – 2024

- Co-ran a small consultancy that delivered 15+ projects: websites, serverless Jamstack apps, and AI integrations for clients in healthcare, education, ecommerce, and SaaS
- Handled each project end to end: scoping, architecture, build, launch, and support, mostly on Next.js, Gatsby, Nuxt, Node.js, and Laravel with Vercel, Netlify, and AWS

Senior Software Engineer · Ready

10/2020 – 02/2022 · New Orleans, LA

- Designed and delivered an electronic medical records (EMR) platform used by 15+ provider practices, built with TypeScript, React, and Apollo GraphQL
- Shipped patient charting, scheduling, and clinical documentation features across the React front end and the GraphQL API, supporting thousands of patient encounters per month
- Designed multi-tenant data models and role-based access, so one deployment could serve many practices while meeting HIPAA requirements
- Owned schema migrations, query tuning, and reliability work that cut patient chart load times from about 2s to under 500ms
- Mentored engineers on the team through code review and pairing

Software Engineer III · EquipmentShare

04/2017 – 10/2020 · Columbia, MO

- Built rental and fleet management features in React and Redux for a construction equipment platform used by contractors across North America
- Helped build a shared design system and component library adopted by several product teams to keep the UI consistent and ship faster
- Worked on Node.js and Firebase/GCP services that moved real-time location and usage data from thousands of connected machines into dashboards and reports
- Shipped React Native screens for field crews on job sites with poor signal

Hybrid Mobile Developer · Intouch Solutions

06/2016 – 04/2017 · Shreveport, LA

- Built custom iPad apps for Fortune 100 pharma clients using Angular and PhoneGap, used by hundreds of sales reps in meetings with doctors
- Wrote native iOS plugins in Objective-C where PhoneGap fell short
- Worked inside pharma's medical, legal, and regulatory (MLR) review process so every screen and claim was approved before release

Client-Side Software Engineer · The Nerdery

01/2014 – 05/2016 · Kansas City, MO

- Built pixel-perfect, responsive front ends for a dozen major brands in ecommerce, media, finance, and healthcare at a software consultancy
- Worked in HTML, CSS, JavaScript, jQuery, PHP, and WordPress, with early React and Angular projects
- Delivered on tight agency timelines alongside designers, project managers, and QA

Biology Instructor · St. Joseph School District

08/2003 – 07/2012 · Overland Park, KS

- Taught Biology, Genetics, Microbiology, Ecology, and Biomedical Science for nine years, and coached the high school tennis team
- Designed the curriculum, labs, and assessments for each course
- Explaining hard ideas to teenagers every day is still how I approach mentoring, code review, and conversations with non-technical stakeholders

SKILLS

AI / LLM / Agentic	Claude, OpenAI GPT-5 / GPT-6, Gemini, Ollama (local inference), LangChain, LangGraph, RAG, embeddings and vector search, agentic workflows and multi-agent systems, tool use and function calling, prompt engineering, LLM evaluation and guardrails, MCP (Model Context Protocol)
Frontend	React, Next.js, Vue, Nuxt, Gatsby, Redux, TanStack Query, Apollo Client, GraphQL, Tailwind CSS, accessibility (WCAG)
Backend	Node.js, Express, NestJS, Laravel, CodeIgniter, Python (FastAPI, Django), WordPress
Mobile	React Native, Expo, PhoneGap / Cordova, Objective-C, iOS
Architecture	REST and GraphQL API design, microservices, serverless, event-driven systems, background jobs, authentication (OAuth 2.0, JWT, SSO), caching, rate limiting, WebSockets
Cloud and DevOps	AWS (Lambda, API Gateway, S3, RDS, DynamoDB, SQS, CloudFront), GCP, Firebase, Vercel, Netlify, Docker, GitHub Actions, CI/CD
Databases	PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Firestore, Elasticsearch, pgvector
Industries	Healthcare, Education, Construction Tech, Fitness and Wellness, Pharmaceutical, Ecommerce, SaaS

EDUCATION

M.S. in Science Education · Northwest Missouri State University — 2005 – 2008

B.S. in Biology (Secondary Science Education) · Missouri Western State University — 1999 – 2002
